3 PRESENTATION PROGRAM AND METHOD

4

5 ABSTRACT OF THE DISCLOSURE

6 There is provided a computer software program and method  
7 for simultaneously playing a programmed sequence of graphics and  
8 sound files on each of a plurality of computers which may or may  
9 not be networked together, which may or may not be similar  
10 computers with similar clock times and processing speeds, and  
11 which does not require any hardware changes to any of the  
12 plurality of computers. Each computer may control a plurality  
13 of different monitors and the present invention permits  
14 different presentation displays (e.g., graphics) to be displayed  
15 on each of the computer monitors controlled by a particular  
16 computer. The present invention provides that a plurality of  
17 simultaneously running software control programs simultaneously  
18 supports, times, retrieves, and plays files for of the plurality  
19 of computer programs to thereby utilize the plurality of  
20 computers to produce a synchronized presentation.
